Ok, that makes sense. Thanks for following up. After our next two meetings with StarLink we will have a better understanding of how things are going to play out regarding the groundwater monitoring plan. I'll keep you informed of the outcome of those meetings.

Thanks!
Dave

Hey Dave-

I sent the email about meeting in response to their cancellation of the 11/20 conference call (I hadn't heard your vm at that point). We can hold off on a DEQ/EPA/SLLI meeting until they're ready to talk more about the GW monitoring plan, but it seemed you were concerned about the delay (which I share).

Happy Thanksgiving!

Eva

Eva,
What would you like to meet with StarLink about? The FS groundwater monitoring work plan?

DEQ and StarLink have two meetings planned. The first is on Dec. 2 to discuss StarLink's overall remediation plan. This is a meeting StarLink requested to give DEQ a high level overview of the anticipated remedial actions for the site. We are not really sure how detailed or comprehensive it will be but I don't expect much detail. Based on our cryptic communication with Joan Underwood we think they will be focusing on soil removal and capping actions on the property itself along with a pump and treat system. Given the amount of work they need to do in order to complete the FS Work Plan I don't expect that there will be much supporting evaluation presented at this meeting.

The second meeting is on Dec. 9 to discuss DEQ's comments on the Draft Feasibility Study Work Plan. Right now they have indicated that the meeting will mostly focus on groundwater and soil hot spot determinations. At this point they have not indicated that they are ready to discuss DQO's for the groundwater monitoring work plan but DEQ intends to reiterate our comments and expectations regarding gw monitoring at the Dec. 9 meeting.

Let me know what issues EPA would like to discuss with StarLink and I can facilitate a meeting. It would probably be best to hold off until after our Dec. 9 meeting unless there is something really pressing that EPA would like to discuss.

Dave

Thanks, Dave. Can you suggest to SLLI that we hold a conference call in the first week of December? How can I help?

Eva,
In our Oct 29, 2015 review letter on the FS Work Plan DEQ requested that StarLink provide a revised FS Work Plan within 90 days. Specific Comment 17 of that letter requested that the work plan include a comprehensive plan addressing gw and soil across the site. This would give them until Jan. 27 to submit a gw monitoring plan. We are pretty disappointed that StarLink cancelled the meeting. We thought it would have been a good time to discuss gw plan DQOs. I am not sure when they will be ready to have a meeting but when they figure it out I will let you know. Given the limited sampling they proposed and the fact that they are not ready to even discuss the DQOs I think we going to need to have a meeting relatively soon in order for them to make the Jan. 27 deadline.

Thanks, Dave. Let me know when we'll have a followup call/meeting. How much time will you be giving them to respond?

Eva,
We just heard from StarLink that they would like to cancel Friday's meeting. Below is an email from Joan Underwood. They apparently don't feel like they are prepared to adequately address DEQ's and EPA's comments at this time.
Copied from November 20, 2015 Joan Underwood email:

Sorry for any inconvenience - we will re-schedule this at a later date given that the plan was not intended or described as a comprehensive groundwater monitoring plan. We are aware of comments both in the DEQ addendum and from EPA. A larger groundwater program discussion is more appropriate after further discussions on the FS and when StarLink can also compile questions we have for DEQ and EPA in understanding how some of the additional data requested will be used.

Hi everyone - this will be to discuss the GW work plan. We will discuss the goal of this initial sampling and how the wells for sampling were chosen based on DEQ RI addendum comments and the goal of this initial sampling so it will be helpful if everyone can log in to view maps or tables we may review.
